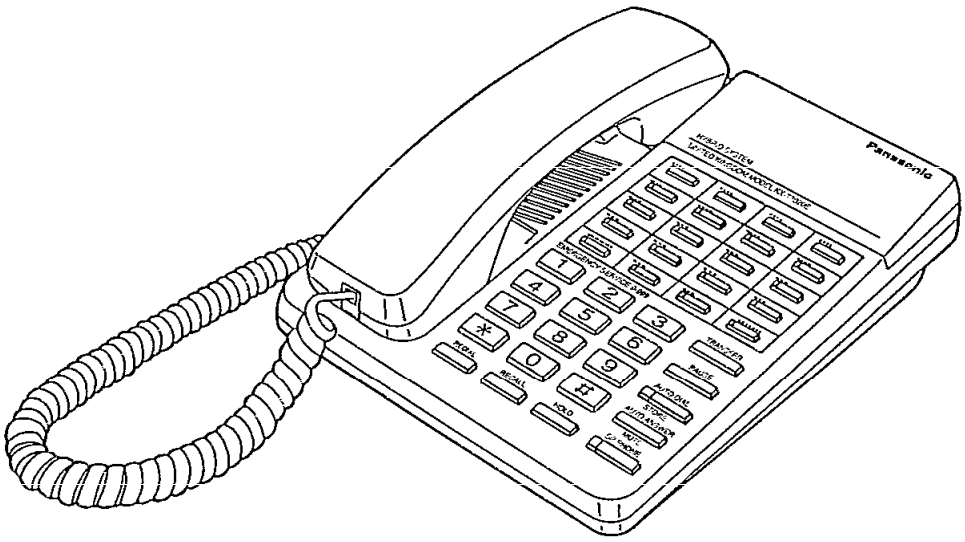
and Technical Guide

PROPRIETARY TELEPHONE FOR
ELECTRONIC MODULAR SWITCHING SYSTEM

KX-T7020E

(for United Kingdom)



■ SPECIFICATIONS

Station Loop Limit:	40 ohms
Cabling Method:	2 pair wire
Jacks:	EMSS, Handset
Dimensions:	172 (W)×90 (H)×240 (D) mm with handset ($6\frac{25}{32}$"×$3\frac{17}{32}$"×$9\frac{7}{16}$")
Weight:	850 g (1 lb 14 oz)

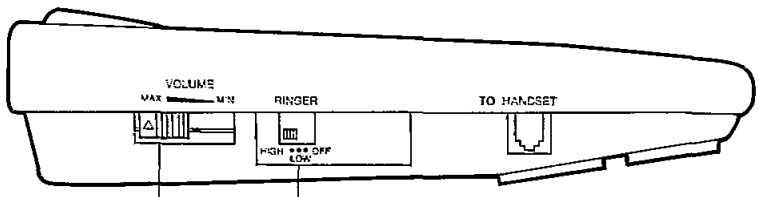
Design and specifications are subject to change without notice.

Panasonic

When you mention the serial number, write down the 11 digits. The serial number may be found on the label affixed to the bottom of the unit.

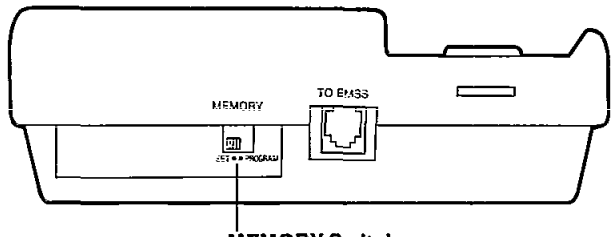
TABLE OF CONTENTS

LOCATION OF CONTROLS



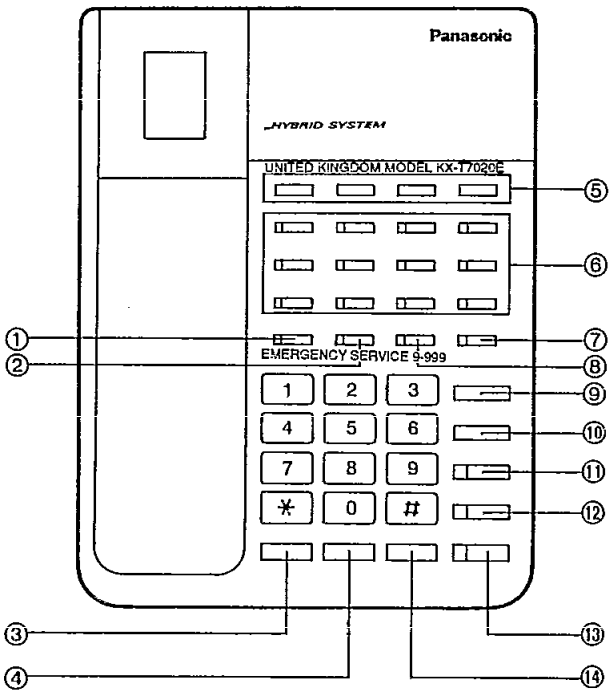
RINGER VOLUME Selector:
HIGH: The ringing sound will be loud.
LOW: The ringing sound will be soft.
OFF: The telephone will not ring.

VOLUME Control:
MAX: The volume will be loud.
MIN: The volume will be soft.



MEMORY Switch:
Set to "SET".
For station programming, set to "PROGRAM".

Fig. 1



KX-T7020E is compatible with the Panasonic Electronic Modular Switching Systems and can perform most functions within each system.

Fig. 2

① INTERCOM Button and Indicator:
Used to make or receive an intercom call.

② CONFERENCE Button and Indicator:
Used to perform a three-party conference.

③ REDIAL Button:
Used to redial the last dialled number.

④ RECALL Button:
Used to send a recall signal to a Central Office.

⑤ Programmable Feature Buttons:
Can be used as One-Touch Dialling buttons or system feature buttons.

⑥ Flexible CO Buttons and Indicators:
Can be used as CO, Direct Station Selection, or One-Touch Dialling buttons.

⑦ Flexible MESSAGE Button and Indicator:
Can be used as Message Waiting, Direct Station Selection, or One-Touch Dialling buttons.

⑧ FWD/DND Button and Indicator:
Used to set or cancel the Call Forwarding or Do Not Disturb feature.

⑨ TRANSFER Button:
Used to transfer an outside or an intercom call to another extension.

⑩ PAUSE Button:
Used to insert a pause in a speed dial number.

⑪ AUTO DIAL/STORE Button and Indicator:
Used before dialling a speed dial number/In "PROGRAM" mode, used to store a station programming procedure in the memory at the end of operation.

⑫ AUTO ANSWER/MUTE Button and Indicator:
Used to answer an intercom call automatically/Used to hear the other party without them hearing you in handsfree mode.

⑬ SP-PHONE Button and Indicator:
Used to make or receive a phone call without using the handset.

⑭ HOLD Button:
Used to place a call on hold.

FOR SERVICE TECHNICIANS

Note the following items when exchanging the LEDs (Ref. No. D617~635) of Dial P.C.Board.
1. Do not use LED again which is removed from P.C.Board.
2. Use soldering iron (less than 15 W) for exchanging LED.
3. Do not heat LED more than 2 seconds.
4. Do not move LED after solder.

MEMO

DISASSEMBLY INSTRUCTIONS

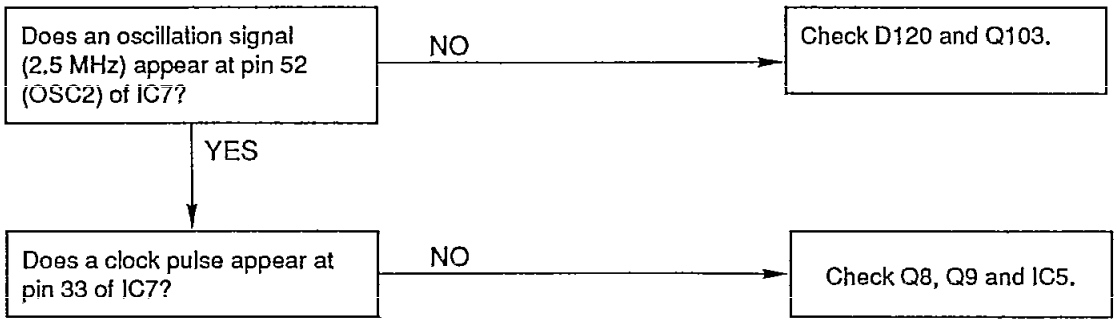
TROUBLE SHOOTING GUIDE

1) NO OPERATION



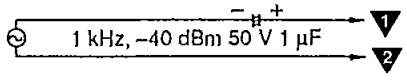
ADJUSTMENT

Perform the following adjustment after replacing IC1 and VR2–VR4.

Teset Equipment:
Loop Simulator
RC Oscillator
VTVM
DC Power Supply

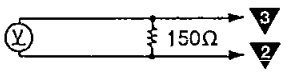
Preparation:
1. Set unit's controls as follows:
   A. SP-PHONE SWITCH..."ON"
   B. VOLUME CONTROL..."MAX"
2. Set the variable resistor of the Loop Simulator to maximum resistance (fully counterclockwise.)
3. Connect the unit to the Loop Simulator.
4. Make adjustment in a quiet room.

Transmission Level Adjustment (for Handset)
1. Set the Loop Simulator selector switch to "TX".
2. Connect the Oscillator to Test Point ▼1 (+)–▼2 (–), as shown below.
3. Set RC Oscillator to 1 kHz, –40 dBm.



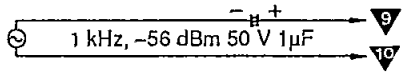
4. Connect the VTVM.
5. Adjust VR4 for a reading of –9±1 dBm, on the VTVM.

Reception Level Adjustment (for Handset)
1. Set the Loop Simulator selector switch to "RX".
2. Apply the 1 kHz, –20 dBm for the Oscilllator.
3. Connect the resistor 150Ω to the test point ▼3–▼2, and connect the VTVM to the both ends.



4. Adjust VR3 for reading of –28±1 dBm, on the VTVM.

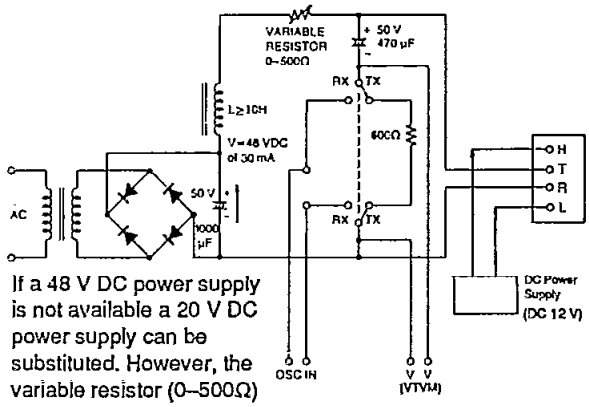
Transmission Level Adjustment (for Speakerphone)
1. Connect the test points ▼4 – ▼5 and ▼6 – ▼7.
2. Set the Loop Simulator selector switch to "TX".
3. Connect the test point ▼4 – ▼8.
4. Connect the RC Oscillator to Test Point ▼9 (+)–▼10 (–), and connect an electrolytic capacitor (50 V, 1 µF) as shown below.
5. Set RC Oscillator to 1 kHz, 56 dBm.



6. Connect the VTVM to test point ▼10 — ▼9.
7. Adjust VR2 for a reading of –17±0.5 dBm, on the VTVM.
8. Disconnect the test point ▼4 – ▼5, ▼6 – ▼7, and ▼4 – ▼8.

Please refer to Printed Circuit Board which is located test points (▼).

Schematic Diagram of Loop Simulator



If a 48 V DC power supply is not available a 20 V DC power supply can be substituted. However, the variable resistor (0–500Ω) must be set to 0 ohms

Fig. 12

BLOCK DIAGRAM

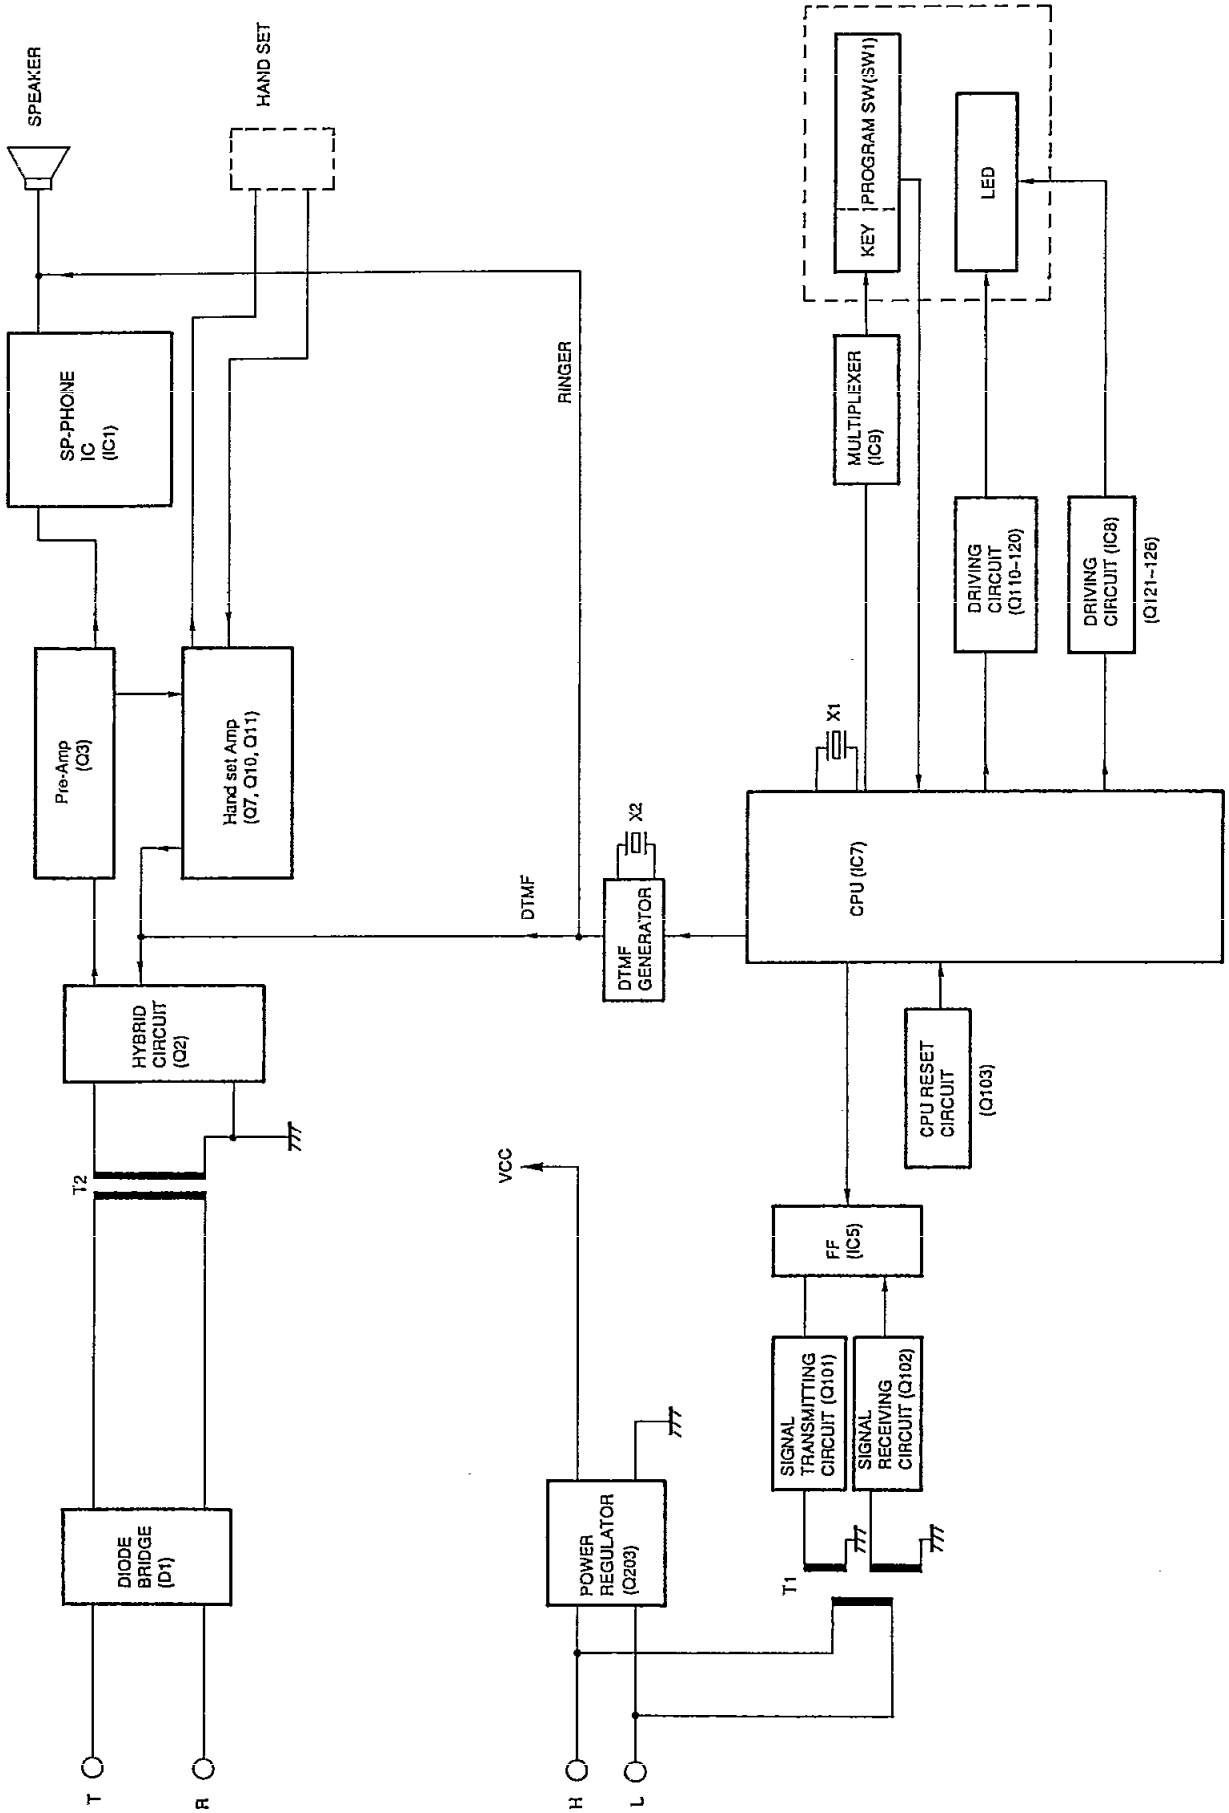


Fig. 10

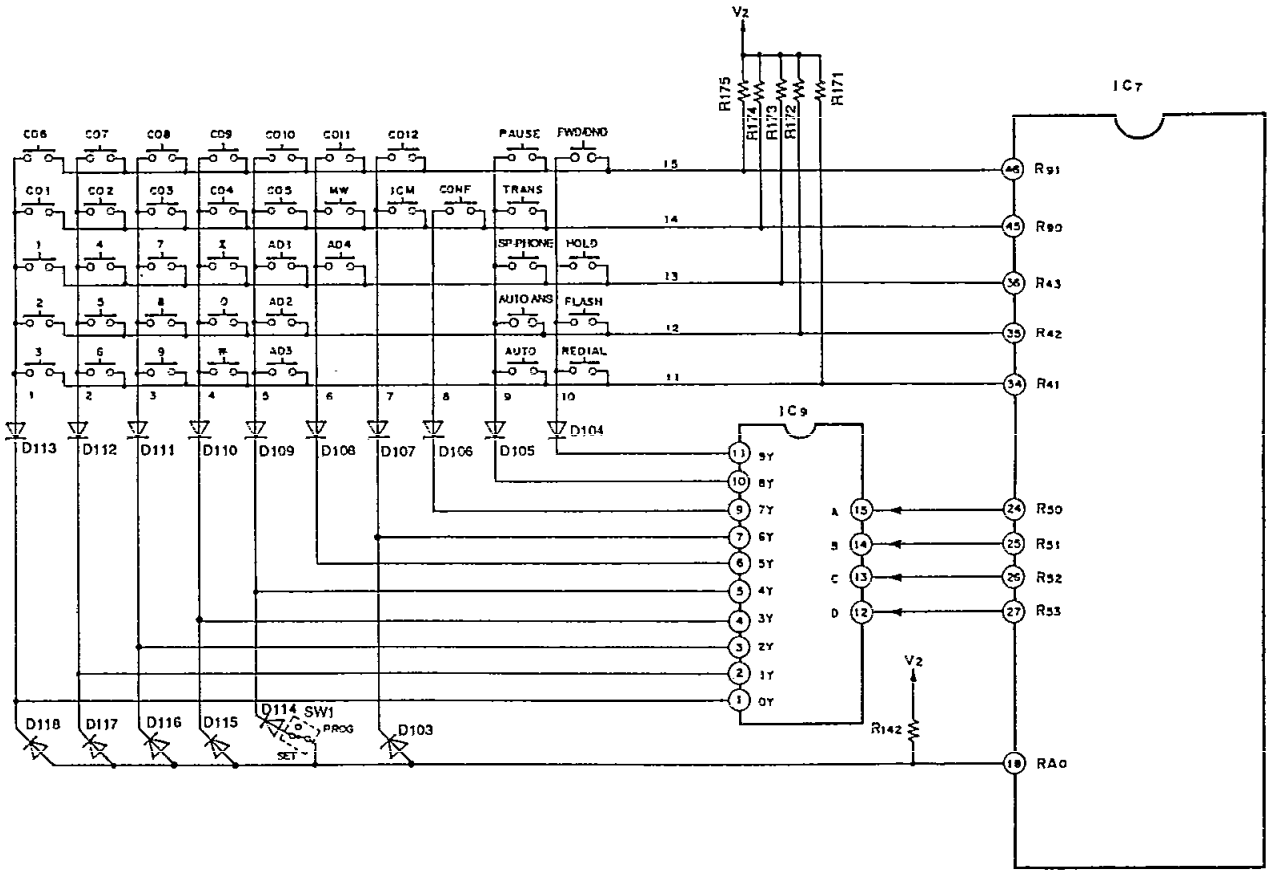
CIRCUIT OPERATIONS

■ KEY INPUT CONTROL CIRCUIT

Data output from IC7 (R50 to R53) is decoded by IC9 as shown in the table below. This decoded information is used to scan the key matrix. The key matrix is read by IC7 according to the timing shown. If a key is pressed, the input corresonding to the row in which the key is located will be brought low during scanning and will be detected by IC7.

Circuit Diagram



Key Input Control Timing Chart

Logic of IC9

	INPUT				OUTPUT								
No.	A	B	C	D	0Y	1Y	2Y	3Y	4Y	5Y	6Y	7Y	8Y	9Y
0	L	L	L	L	L	H	H	H	H	H	H	H	H	H

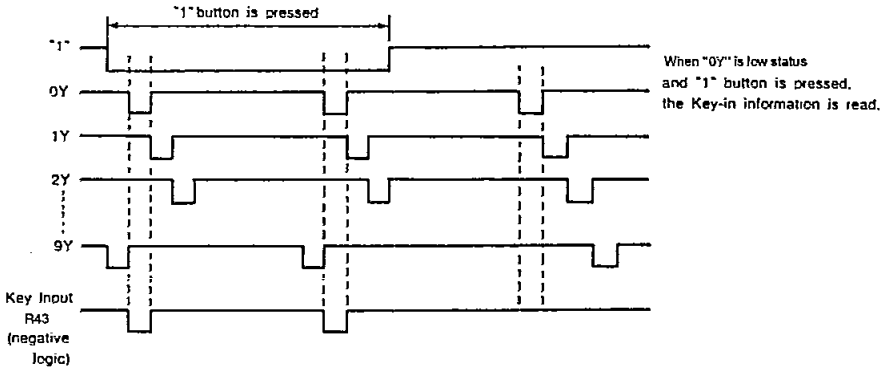
5	H	L	H	L	H	H	H	H	H	L	H	H	H	H
6	L	H	H	L	H	H	H	H	H	H	L	H	H	H
7	H	H	H	L	H	H	H	H	H	H	H	L	H	H
8	L	L	L	H	H	H	H	H	H	H	H	H	L	H
9	H	L	L	H	H	H	H	H	H	H	H	H	H	L

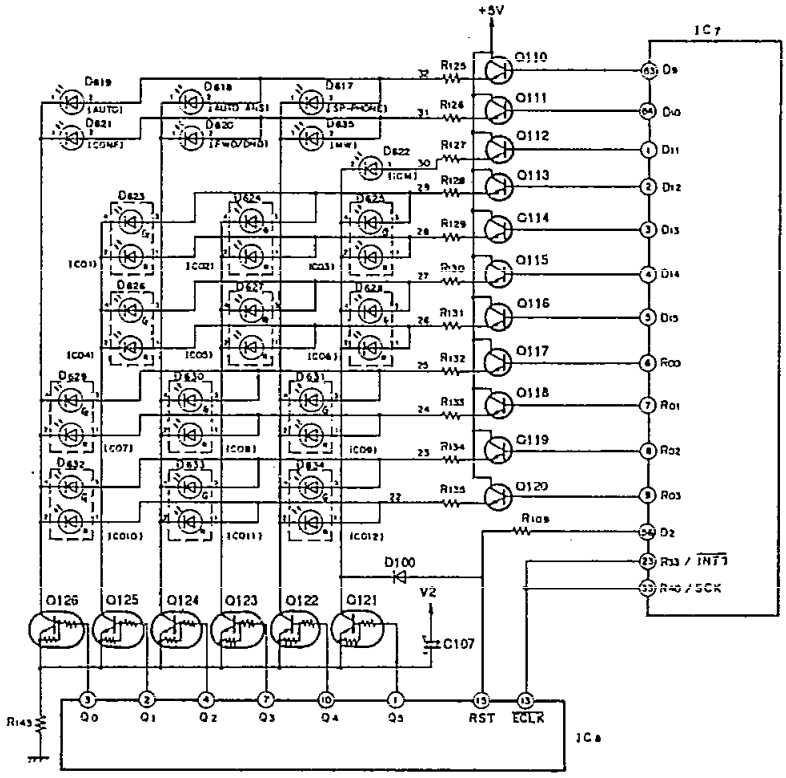


■ LED CIRCUIT

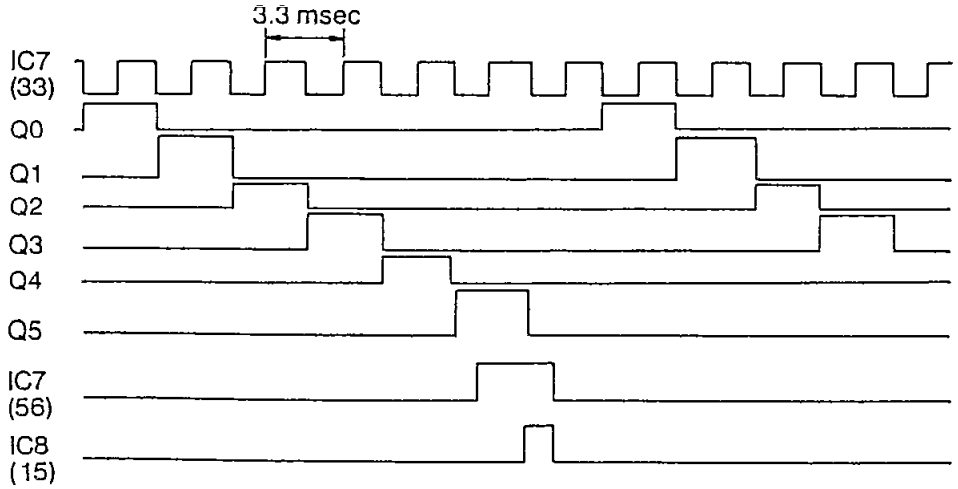
Circuit Operation:

The status of the LED's in the matrix is controlled by the outputs of IC7 and IC8. Transistors Q121–Q126 are sequentially turned on by IC8 which is reset every 6 clock cycles using port D2 from IC7. This is shown in timing chart below. To illuminate an LED, a high level is output from the relevant port of IC7 (port D9–D15, R01–R03) at the same time as the correspoding column is taken low by IC8, Q121–126.

Circuit Diagram



Timing Chart



■ DATA COMMUNICATION CIRCUIT

Function:
The data communication circuit provides a path for information exchange between the EMSS and EMSS proprietary telephone, which is used for transmitting such items as key input information and LED/LCD control.

Circuit Operation:
After receiving an IRQ signal from the EMSS, the EMSS proprietary telephone sends key input information (max 19 pulses). The EMSS proprietary telephone then receives LED control information etc. from the EMSS and returns an acknowledge signal.

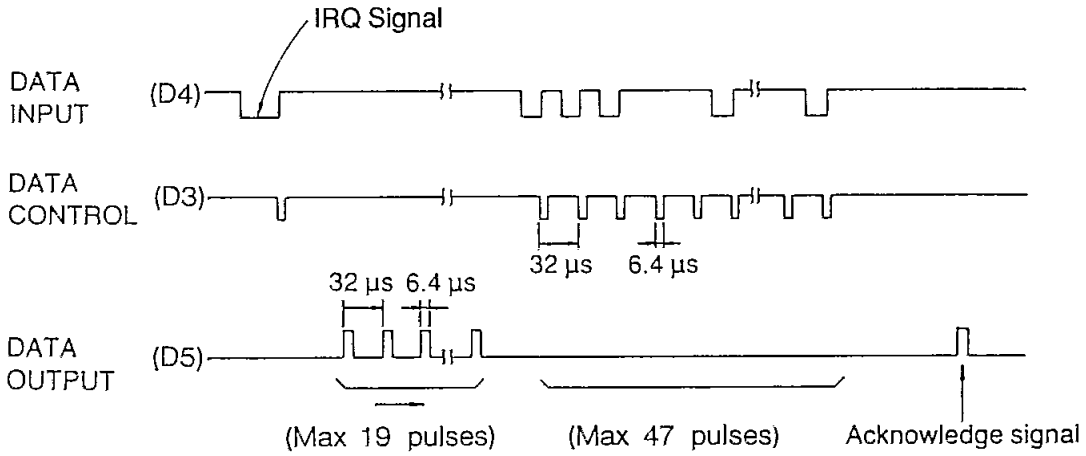
1) Reception
The data from the EMSS is received via the H and L line along the path;

H, L Line→T1→R166→Q102→IC5→IC7 pin 58

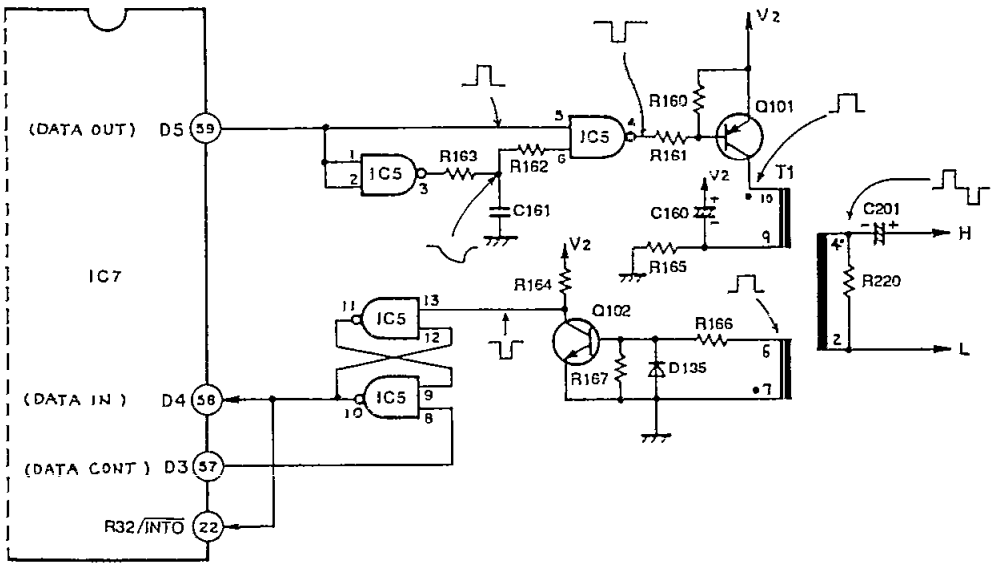
2) Transmission
The data to the EMSS proprietary telephone is transmitted along the following path.

IC7 pin 59 → IC5→ R161 → Q101 → T1 → H, L Line

Timing Chart



Circuit Diagram

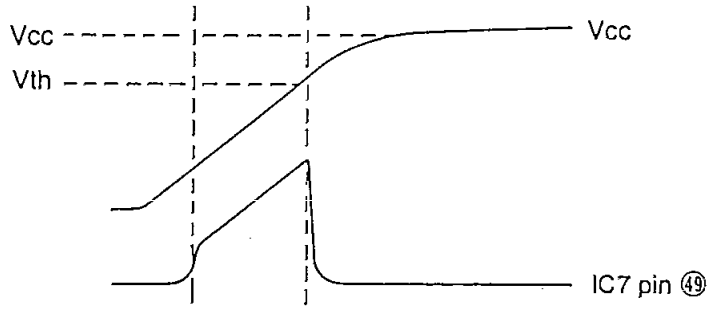


■ RESET CIRCUIT

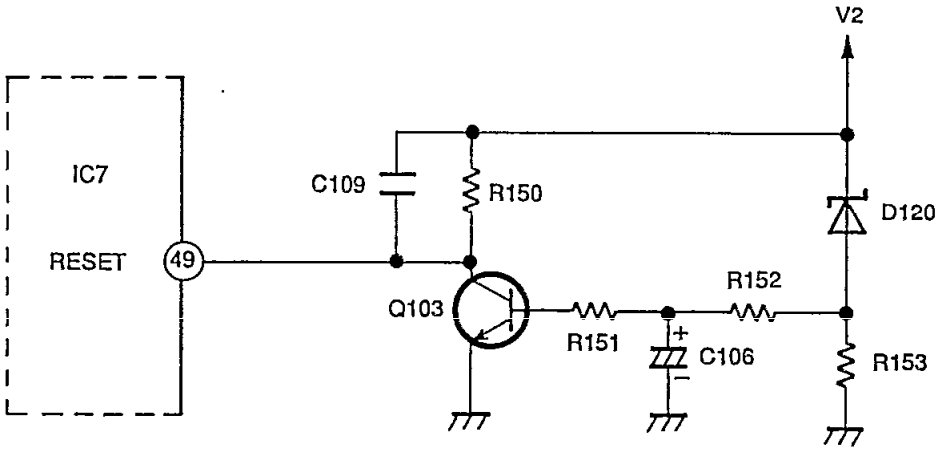
Circuit Operation:
This circuit is used for transmission of a reset pulse to the CPU (IC7) at the following times, connecting the telephone line jack and switching on the EMSS. The timing chart is shown below.

Power ON→Q103 OFF→IC7 (pin 49) high level→Q103 ON→IC7 (pin 49) low level

Timing Chart



Circuit Diagram

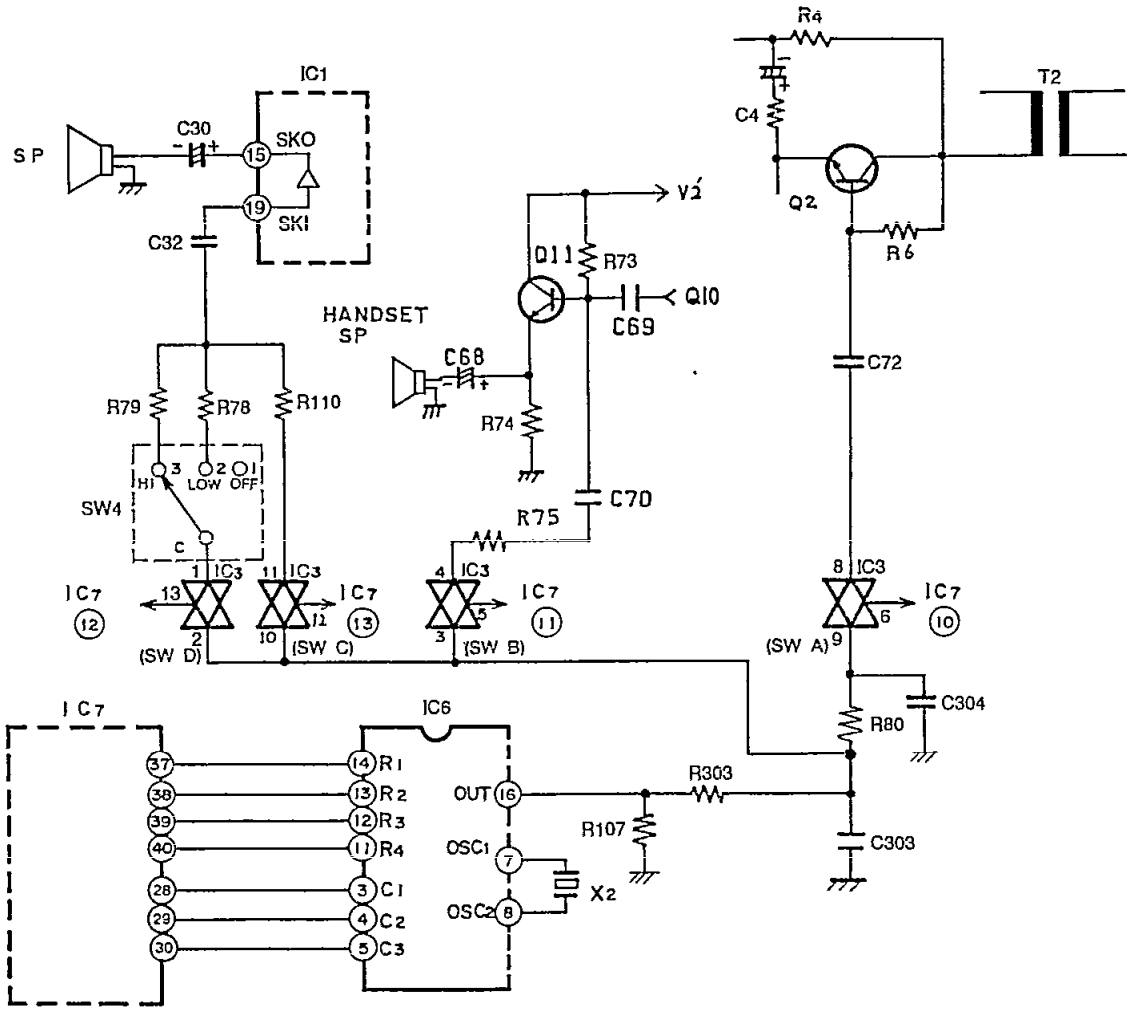


■TONE GENERATION CIRCUIT

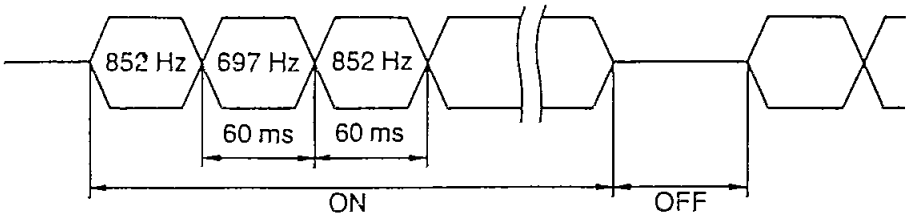
Function:
This circuit generates all system tones including COL, extension, busy and DTMF signals. It is comprised of IC6 (DTMF Generator IC) and IC3 (Analogue Switch).

Circuit Operation:
For an output of a signal row tone, the row terminal (R1–R4) and the each column terminals (C1–C3) intersecting with it are brought a low state. For a dual tone output, one row terminal and one column terminal are brought to low state.

Circuit Diagram



1) Calling Tones from COL and EXT.
For a calling tone from a CO line or extension, pin 13 of IC3 (Analogue Switch) is brought to high state thus the single row tone signal shown below is output from IC6, and the tone volume is controlled by SW4.



IC6 pin 16 → IC3 pin 2~1→SW4→C32→IC1 pin 19→IC1 pin 15→C30→SP

2) Busy Station Calling Tone
When pin 12 of IC3 (Analogue Switch) is brought to a high state.
852 Hz and 697 Hz signals are outputted from IC6 alternately at intervals of 60 ms.
The signal flow is;

IC6 pin 16 → IC3 pin 10~11→R110→C32→IC1 pin 19→IC1 pin 15→C30→SP

3) DTMF Signal
Pins 5, 6 and 12 of IC3 are brought to a high state and a DTMF tone is generated as shown below.
The signal flow is;

IC6 pin 16 → IC3 pin 9~8→C72→Q2→T2→Telephone Line
→ IC3 pin 3~4 → R75 → C70 → Q11 → C68 → Handset Speaker
(IC3 pin 10~11→R110→C32→IC1 pin 19→IC1 pin 15→C30→SP)

DTMF Frequency Table

		High Group		
		1209 Hz	1336 Hz	1477 Hz
Low Group	697 Hz	1	2	3
	770 Hz	4	5	6
	852 Hz	7	8	9
	941 Hz	*	0	#

Truth Table

	C1	C2	C3	R1	R2	R3	R4
1	L	H	H	L	H	H	H
2	H	L	H	L	H	H	H
3	H	H	L	L	H	H	H
4	L	H	H	H	L	H	H
5	H	L	H	H	L	H	H
6	H	H	L	H	L	H	H
7	L	H	H	H	H	L	H
8	H	L	H	H	H	L	H
9	H	H	L	H	H	L	H
*	L	H	H	H	H	H	L
0	H	L	H	H	H	H	L
#	H	H	L	H	H	H	L

4) Key-In Tone
An 852 Hz single tone is used as the key-in tone. When pins 5 and 12 of IC3 are brought to a high state, a tone is generated from IC6 and is heard at the speaker.
The signal flow is shown below.

IC6 pin 16 → IC3 pin 3~4 → R75 → C70 → Q11 → C68 → Handset Speaker
→ IC3 pin 10~11 → R110 → C32 → IC2 pin 19 → IC2 pin 15 → C30 → SP

CONDITION	IC7 pin 10	IC3 SWA	IC7 pin 11	IC3 SWB	IC7 pin 13	IC3 SWC	IC7 pin 12	IC3 SWD
Ringing	L	OFF	L	OFF	L	OFF	H	ON
Call Waiting	L	OFF	L	OFF	H	ON	L	OFF
Tone Dial (Handset)	H	ON	H	ON	L	OFF	L	OFF
Tone Dial (Speakerphone)	H	ON	L	OFF	H	ON	L	OFF

■ HANDSET CIRCUIT

1) Transmission Signal Path

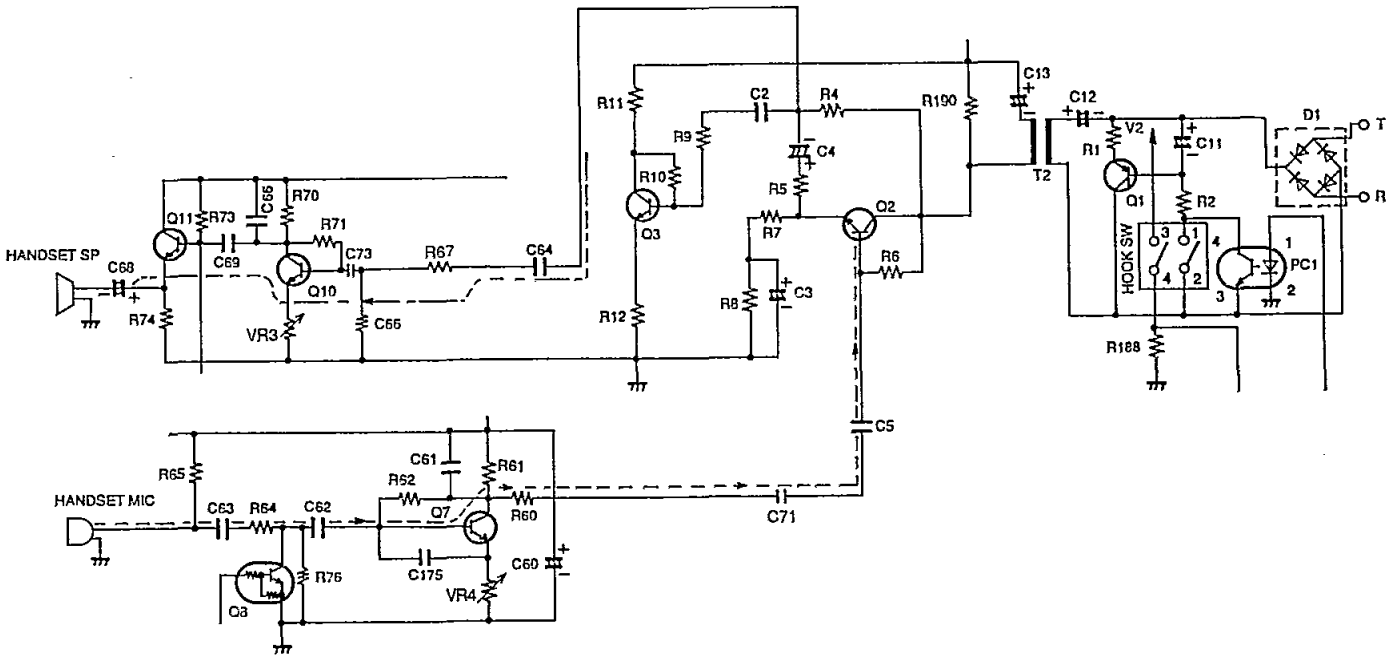
The input signal for the handset microphone is sent to the telephone line via the following path:

Handset MIC→C63→R64→C62→Q7→R60→C71→C5→Q2→T2→D1→Telephone Line

2) Reception Signal Path

The input signal from the telephone line is sent to the receiver through the following path:
Telephone Line→D1→T2→R4→C64→R67→C73→Q10→C69→Q11→Q68→Handset Speaker

Circuit Diagram



■ SPEAKERPHONE CIRCUIT

Function:
This circuit controls the automatic switching of the transmitted and received signals, to and from the telephone line, when the unit is used in the hands-free mode.

Circuit Operation:
The speakerphone can only provide a one-way communication path.
In other words, it can either transmit an outgoing signal or receive an incoming signal at a given time, but cannot do both simultaneously. Therefore, a switching circuit is necessary to control the flow of the outgoing and incoming signals. This switching circuit is contained in IC1 and consists of a Voice Detector, Tx Attenuator, Rx Attenuator, Comparator and Attenuator Control. The circuit analyzes whether the Tx (transmit) or the Rx (receive) signal is louder,and then it processes the signals such that the louder signal is given precedence.
The Voice Detector provides a DC input to the Attenuator Control corresponding to the Tx signal.
The Comparator receives a Tx and Rx signal, and supplies a DC input to the Attenuator Control corresponding to the Rx signal. The Attenuator Control provides a control signal to the Tx and the Rx Attenuator to switch the appropriate signals ON and OFF. The Attenuator Control also detects the level of the volume control to automatically adjust for changing ambient conditions.

1) Control Signal Path
Control signals for transmission and reception are inputted to IC1 via the following path:

(Transmission Control Signal Path)
MIC→IC1 pin 9 →IC1 pin 10→IC1 pin 3 → IC1 pin 4→ IC1 pin 5

(Reception Control Signal Path)
Telephone Line→R4→Q3→IC1 pin 7

2) Transmission/Reception Switching
The comparison result between Tx and Rx outputs as a DC level at IC1 pin 23 .
Tx level is high .....pin 23 = pin 20 - 6 mV
Rx level is high.....pin 23 = pin 20 - 150mV
The comparator output is connected to the attenuator control inside IC1.

3) Voice Detector
The output of the mic amp (pin 10 of IC1) is supplied to pin 13 of IC1 as a control signal for the voice detector.

4) Attenuator Control
The attenuator control detects the setting of the volume control through pin 24 of IC1 and automatically adjusts for changing ambient conditions.

5) Transmission Signal Path
The input signal from the microphone is sent through the circuit via the following path:
Note that, in this case, the logic states of pins 10, 11 and 12 are low, Low and Low respectively.
MIC → C39 → IC1 pin 9 → IC1 pin 10 → IC1 pin 3 → IC1 pin 4 → R14 → C5 → Q2 → T2 → D1 →Telephone Line

6) Reception Signal Path
Signals received from the telephone line are outputted at the speaker via the following path:
Note that, in this case, the logic states of pins 10, 11 and 12 are low, low and low.

Telephone Line→D1→T2→R4→Q3→C6→R191→IC1 pin 27→IC1 pin 26→IC1 pin 19→IC1 pin 15→SP

7) Busy Tone Detector Circuit
Signal path for busy tone detector circuit is;
Telephone Line→D1→T2→C90→IC10 pin 6-7→IC10 pin 2-1→D90→Q12→IC7 pin 60

Model KX-T7020E

Notes:
1. The marking (RTL) indicates that the Retention Time is limited for this item. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.
2. The S mark indicates service standard parts and may differ from production
3. Important safety notice.
Components identified by the ⚠ mark special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.
4. RESISTORS & CAPACITORS
Unless otherwise specified.
All resistors are in ohms(Ω) k=1000Ω,M=1000kΩ
All capacitors are in MICRO FARADS(μF) P=μμF
